Claims 1, 4 -- 7, 9, 15, 17, 35, 36, 38, 40, 42, 55 and 56 are rejected under 35 USC 102 (b) as being anticipated by a Takeuchi (182) or Bernstein (580) for the specific reasons set forth in the previous office action (4 -- 21 -- 05).

Claims 1, 2, four -- 9, 15 -- 18, 35 -- 43, 55 and 56 are rejected under 35 USC 103 (a) as being unpatentable over the prior art in view of Takeuchi (182) or Bernstein (580) for the specific reasons noted in the previous office action (4 -- 21 -- 05).

Claims 10 -- 14 and 19 -- 34 are rejected under 35 USC 103 (a) as being unpatentable over Takeuchi (182) or Bernstein (580) for the reasons described in the previous office action (4 -- 21 -- 05).

In regard to the 35 USC 102 rejections it is felt that electrode locations would inherently coincide with at least some eigenmodes sends flecked role vibrations are being produced in both plates. This assumption is also backed up by a reading of the admitted prior art described in applicant's specification. Applicant states that when the comb pattern is aligned with all the eigenmodes of the flectural plate the result is a single eigenmode which results in a pronounced single peak. It is noted however, that the claims are not limited to the comb pattern being aligned with **all** eigenmodes.

Assuming, arguendo, that the electrodes of the references would not inherently coincide with eigenmodes, it would have been obvious to one of ordinary skill in the art to make

Art Unit: 2834

such placements for increased efficiency as is well known in the art; again, as illustrated by the prior art described in applicant's specification.

Applicant has argued the Bernstein does not teach a comb pattern in electrode. Please note figures 3 and 4, is specially electrode fingers 48 and 52 which demonstrate a comb pattern over the entire extent of the flexural portion of the plate.

Applicant argues that Takeuchi shows only spiral electrode patterns. Please note figure 19 and column 19 lines 37 -- 53 which clearly describe a comb pattern.

Claims 3 and 44 -- 49 remain objected to, while claims 50 -- 54 remain allowable. This action is a **final rejection** and is intended to close the prosecution of this application. Applicant's reply under 37 CFR 1.113 to this action is limited either to an appeal to the Board of Patent Appeals and Interferences or to an amendment complying with the requirements set forth below.

If applicant should desire to appeal any rejection made by the examiner, a Notice of Appeal must be filed within the period for reply identifying the rejected claim or claims appealed. The Notice of Appeal must be accompanied by the required appeal fee.

If applicant should desire to file an amendment, entry of a proposed amendment after final rejection cannot be made as a matter of right unless it merely cancels claims or complies with a formal requirement made earlier. Amendments touching the merits of the application which otherwise might not be proper may be admitted upon a showing

Art Unit: 2834

a good and sufficient reasons why they are necessary and why they were not presented earlier.

A reply under 37 CFR 1.113 to a final rejection must include the appeal from, or cancellation of, each rejected claim. The filing of an amendment after final rejection, whether or not it is entered, does not stop the running of the statutory period for reply to the final rejection unless the examiner holds the claims to be in condition for allowance. Accordingly, if a Notice of Appeal has not been filed properly within the period for reply, or any extension of this period obtained under either 37 CFR 1.136(a) or (b), the application will become abandoned
